The NFO Sinus® frequency inverter is based on a patented Swedish technology that allows you to control the speed of electric motors without generating electromagnetic interference, which in turn offers a range of unique benefits. Thanks to the sine-wave voltage, the inverter is intrinsic EMC, i.e., it is interference-free in itself.

SIMPLE
Installation is easy and cost-efficient due to there is no need of shielded cables, EMC filters or other EMC-classed installation accessories. When undertaking energy efficiency projects, it's also possible to use the existing non-shielded cables, this makes the installation work quick, easy and cost-efficient. There is no cable length limitation between the motor and the NFO Sinus® except for the resistance of the cable. The NFO Sinus® can be installed where it's suitable depending on the application, even if the distance to the motor is several hundred meters thanks to the Sinus technique which gives cost-efficient flexible solutions in all environments.

SILENT
NFO Sinus® is interference free and therefore does not create any electromagnetic interference which can disturb surrounding equipment. The NFO Sinus® satisfies the most stringent demands set out in the EMC directive 2014/30/EU without filters and without shielded cables and can be used in every kind of environment from industrial, medical to residential. With NFO Sinus® you also avoid all the disturbing switching noise in the motor, which results in a quieter environment.

SAFE
NFO Sinus® does not generate any bearing currents. The motor therefore has a longer lifespan. No earth leakage currents are generated, which means that residual current devices for both personal safety and fire prevention can be used. This provides a high level of electrical safety.

HIGH PRECISION
The motor speed is very precisely controlled and with full torque right from stand-still as well as at a low speed regardless of chosen control mode Speed, frequency, torque or process-control . The inverter furthermore has an energy-save function that allows you to conserve even more energy when running with a low load on the motor, e.g., fans, which at times run at a low speed.

Simple installation
- No shielded cables
- No complicated installation requirement
- No limitations of distance

Silent operation
- No electomagnetic interference
- No irritating switching noise

Safe technology
- No bearing currents
- No earth currents

NFO Sinus® is available in size 0,37 kW up to 22 kW
